

Apple released macOS 10.15 Catalina on October 7, 2019.

Please note that Catalina is not yet fully tested with AMS Neve software.

We recommend that you wait until complete AMS Neve software compatibility with Catalina is announced before updating to this new operating system.

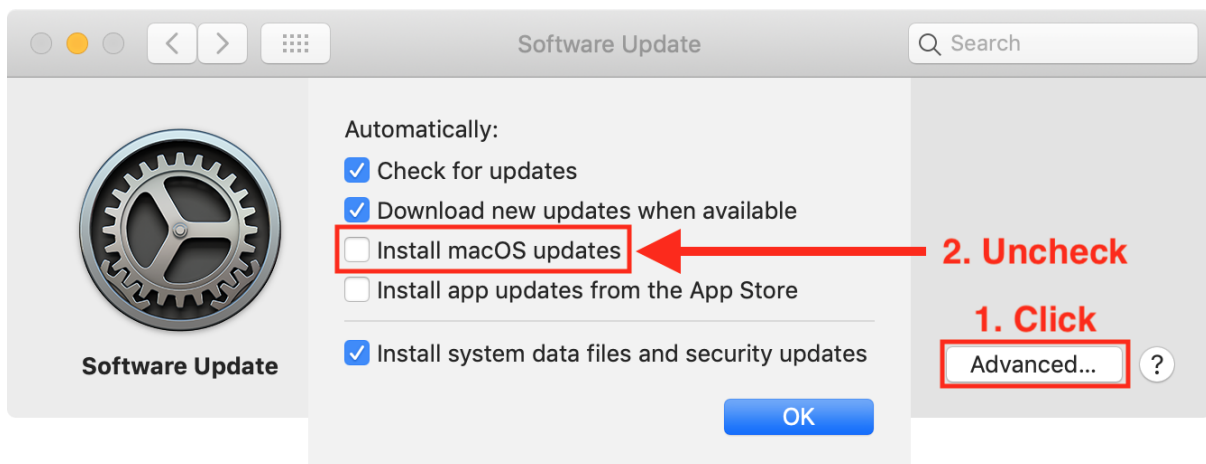

Additionally, many audio software companies are advising users not to install Catalina due to various incompatibilities with their software. We recommend inquiring about compatibility with the companies that make the software you use before installing the new OS.

To prevent macOS from updating automatically when running macOS 10.14 Mojave, uncheck the "Install macOS updates" option in System Preferences > Software Update > Advanced options, as shown below;

How to disable automatic macOS updates in Mojave

Note: This procedure only applies when running macOS 10.4 Mojave. Earlier macOS versions do not have the Software Update pane within System Preferences.

1. Open **System Preferences** under the Apple Menu at upper left of display
2. Click the **Software Update** icon to open the preference pane
3. Click the **Advanced...** button at lower right of the Software Update pane
4. Uncheck the **Install macOS** updates option, then click **OK**
